This shows that at least one instance of issue 55
now seems to work!
<https://github.com/bash0/cewe2pdf/issues/55>

Oma Edith ist zu Besuch um ihren Mio
endlich in die Arme zu schließen

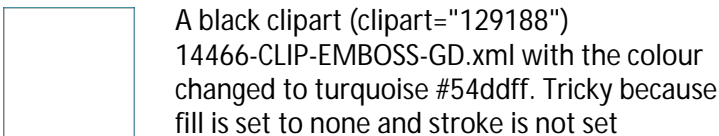

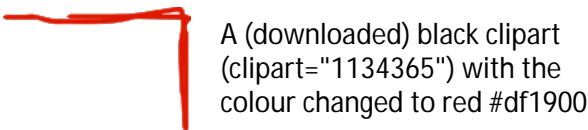

The FranklinGothic problem: The CEWE FG fonts are (a) badly formed (all of them have the same full font name) and (b) CEWE does not supply an FG italic font! This resulted in our generated pdf inexplicably using FG bold italic where it should have used FG bold. I suspect an issue in the reportlabs font management. The "fix" is some improvement of loading of the fonts in our code (including better diagnostics) and to define the FranklinGothic font family by hand in cewe2pdf.ini, using the Windows FG italic font to take the place of the missing CEWE FG italic. But don't ask me why that fixes it. <https://github.com/bash0/cewe2pdf/issues/128>

FG Normal	Arial
FG Bold	Arial Bold
<i>FG Italic</i>	<i>Arial Italic</i>
<i>FG Bold Italic</i>	<i>Arial Bold Italic</i>
<i>Balloon Caps</i>	
<i>Harlow Solid Italic</i>	

The whole issue of "incomplete" font families is not clear. CEWE manages a full set of four from the single pecita.ttf font file, as shown below, while our code needs separate files for the four weights!

Peci ta Book
Peci ta Book bold
Peci ta Book I talic
Peci ta Book Bold I talic

<https://github.com/bash0/cewe2pdf/issues/85>

The OpenType font .otf file problem: CEWE provides some fonts in OpenType files that we cannot handle. We try to fix that with a one-time conversion to ttf files. Here are some tests <https://github.com/bash0/cewe2pdf/issues/133>

CEWE Head
CEWE Head Italic
CEWE Head Bold
CEWE Head Bold Italic

<https://github.com/bash0/cewe2pdf/issues/153>

This is the Crafty Girls font, downloaded from fonts.google.com. Does it get the right line spacing? Also when an explicit new line is used?

This is on page 26.

This is the last page that can be used.
